                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a new isolated human proto-oncogene tyrosine kinase peptide or its allelic variant, orthologue or fragment. The peptide is useful for preparing a composition for treating a disease or condition mediated by a human kinase protein e.g. cancer. The present sequence represents the human proto-oncogene tyrosine kinase cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 4;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New human kinase peptides, useful for preparing a treating a disease or condition mediated by human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (APPL-)

New human kinases and phosphatases, useful for diagnosing, treating preventing atherosclerosis, hypertension, AIDS, allergy, multiple sclerosis, osteoarthritis, Alzheimer's disease, Crohn's disease, car hepatitis.

Claim 5; SEQ ID NO 65; 347pp; English.

The invention relates to a novel isolated polypeptide which is a human CC kinase and phosphatase (KPP). The polypeptide of the invention CC demonstrates cardiovascular, antiarteriosclerotic, hypotensive, CC vasotropic, antialfammatory, antianginal, anti-HTV, antiallargic, CC antidiabetic, immunosuppressive, antityproid, dermatological, accompathic, antiartritic, uropathic, ophthalmological, antirheumatic, CC antiparkinsonian, nootropic, anticonvulsant, hepatotropic, antipsoriatic, CC antiparkinsonian, nootropic, anticonvulsant, hepatotropic, antipsoriatic, CC haemostatic, cytostatic, antilipaemic, antiparasitic, antihelmintic, CC antibacterial, virucide, protozoacide and fungicide activities. The CC kinase and phosphatase (KPP) polynucleotides, polypeptides, agonists and CC disorders such as cardiovascular diseases, immune system disorders, CC neurological disorders, disorders affecting growth and development, cell protozoan or helminthic infections. Furthermore, the molecules of the invention may be useful for creating transgenic animals to model human CC disease and during gene therapy. The current sequence is that of a human CC KPP CDNA of the invention.

The polynucleotide sequences of the invention or a composition comprising these polynucleotides are useful as a high throughput method for detecting altered expression of one or more polynucleotides in a sample. The polynucleotides can be used in the diagnosis of disorders associated with foam cell development such as atherosclerosis, cerebral stroke, and cardiovascular disorders such as coronary artery disease. The polynucleotide sequences can also be used PCR primers and probes. The polynucleotide sequences can also be used profession of the invention are also polynucleotide sequences of the invention which are differentially expressed during foam cell differentiation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Composition useful for diagnosis of conditions, disorders or diseases associated with atherosclerosis, comprises several polynucleotides that are differentially expressed in foam cell development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 2889 BP; 600 A; 873 C; 929 G; 487 T; 0 U; 0 Other;

The present sequence encodes the human kinase and phosphatase protein (KPP), designated KPP-43. The human KPP sequences from the present CC invention have cytostatic, antiarreriosclerotic, anticonvulsant, compounds, neuroprotective, carebroprotective, anti-HIV, antiallergic, antiinflammatory and thyromimetic activities, and can be used in gene CC therapy. The human KPP proteins and polymucleotides can be used in GC diagnosing, treating and preventing diseases or conditions associated CC with the decreased expression or overexpression of KPP, such as cell CC proliferative (e.g. cancer, atherosclerosis), neurological (e.g. RIDS, CC epilepsy, Huntington's disease, stroke), immune/inflammatory (e.g. RIDS, CC disorders, or infections. They can also be used in assessing the effects CC of exogenous compounds on the expression of nucleic acid and amino acid CC sequences of KPP. The KPP or its fragments are useful in screening CC compounds for effectiveness as agonist or antagonist of the polypeptides, or in altering the expression of the target polynucleotide and compounds that specifically bind to or modulate the activity of the polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cerebroprotective; anti-HIV; antiallergic; antiinflammatory; thyromimetic; gene therapy; cell proliferative disorder; cancer; atherosclerosis; neurological disorder; epileps; Huntington's disease; stroke; immune disorder; inflammatory disorder; AIDS; allergy; developmental disorder; Hypothyroidism; Cushing's syndrome; infection; KPP-43; single nucleotide polymorphism; SNP; gene; ss.

                                                                                                                   The invention relates to a method for inducing neutralisation of cells or tissues by using a protein binding to CRAM (collapsing-response mediator protein-associated molecule) protein or its encoded gene. The proteins and their encoded genes are useful in gene therapy and regenerative medicine, e.g. by inducing neutralisation of mitochondria. They are also applicable in diagnosis, drug development for neural diseases and studying the mechanism of pathosis. The current sequence represents CRAM protein related cDNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       27-AUG-2003
25-MAR-2003
27-JAN-1991
The fur gene, encoding furin, is in the human and cat genomes directly upstream of this fes/fps proto-oncogene sequence. Furin is strongly expressed in specific types of tumours and labelled RNA or DNA probes of the fur gene and antibodies against furin can be used for diagnostic purposes. (See also AAN70061-62 and AAP70056). (Updated on 25-MAR-2003 to correct PA field.) (Updated on 25-MAR-2003 to correct PA field.)

Also disclosed is an isolated polynucleotide encoding (I), a recombinant vector comprising the polynucleotide and a gene therapeutic agent comprising the recombinant vector as an active ingredient. The proteins, genes, agents and methods are useful for preventing and treating a cartilage disease, e.g. osteoarthritis, cartilage defect, or rheumatoid archirits. The current sequence represents a human gene of the invention encoding a protein that promu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New purified protein that promotes type II collagen expression, useful for preventing and treating a cartilage disease, e.g. osteoarthritis, cartilage defect, or rheumatoid arthritis.

This invention is related to a novel isolated canine nucleic acid sequences and the construction of canine microarrays containing a significant portion of the canine genome. The isolated canine nucleic acid sequences of the invention may be useful for drug screening and toxicity assays. The invention is therefore useful for assessing the impact, including toxicity, of a compound, pharmaceutical agent or environmental pollutant on a cell or living organism. The methods are useful for detecting genes that are up- or down-regulated in canines
                                                                                                                                                                                                                                                                                                                                                                             New isolated nucleic acid molecule, useful for drug screening and toxicity assays or for assessing the impact, including toxicity, of compound, pharmaceutical agent or environmental pollutant on a cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     canine microarray; drug screening; toxicity assay; environmental pollutant; cellular response; gene expression profile; toxic response; liver necrosis; fatty liver disease; protein adduct formation; hepatitis; dog; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC to detect a cellular response in a sample individually or as part of a condulate gene expression profile. It is also useful as a target for agents that CC modulate gene expression or activity. The database is useful for CC producing electronic Northerns that allow the user to determine the cell CC type or tissue in which a given gene is expressed and to allow CC determination of the abundance or expression level of a given gene in a CC particular tissue or cell. The methods are useful for determining the CC similarity of a toxic response to one or more individual compounds. The CC methods are useful for predicting at least one toxic response or the CC methods are useful for predicting at least one toxic response or the CC pathologies such as those of the liver (liver necrosis, fatty liver CC disease, protein adduct formation or hepatitis), those of the kidney, CC heart, brain or testes, or other pathologies associated with at least one CC ompound or test agent due to the similarity of the expression profile CC compared to the profile induced by a known toxin. The present sequence is CC that of a canine DNA sequence which was claimed for use during the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a purified protein (I) that promotes type II collagen expression. Also disclosed is an isolated polynucleotide encoding (I), a recombinant vector comprising the polynucleotide and a gene therapeutic agent comprising the recombinant vector as an active ingredient. The proteins, genes, agents and methods are useful for preventing and treating a cartilage disease, e.g. osteoarthritis, cartilage defect, or rheumatoid arthritis. The current sequence represents a human gene of the invention encoding a protein that promotes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New purified protein that promotes type II collagen expression, useful for preventing and treating a cartilage disease, e.g. osteoarthritis, cartilage defect, or rheumatoid arthritis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2205
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2148
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1917
```

38043 cDNA sequences, appearing as determined by the technique of SBH included is a purified polypeptide

Claim

۲,

SEQ

ID NO 1503;

44pp; English.

The invention relates to an isolated polynucleotide comprising any or 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence determined by the technique of SBH (sequencing by hybridisation). Alt

comprising

isation). Also corresponding

one

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        a reading frame of the novel polynucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (EST) for identifying expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for throngones and cane manning in the committee, as oligomers for PCR,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified polypeptide is useful for generating antibodies specific for it. The present sequence is one of the 38043 isolated CDNA/EST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.html?DocID=20030073623
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAS17052 standard; cDNA; 361 BP

The invention relates to identifying a compound which binds to a Kinase (c) (encoded by a nucleotide sequence of 1868, 403, 545, 361, 473, 3001, 526, 663 or 1448 base pair (bp) as given in the specification) comprising contexting the kinase with a test compound under suitable conditions for binding, and detecting binding of the compound to the Kinase. The method cis useful for identifying a compound which binds to the kinase and also correctly compounds which modify the activity of the kinase. The context is contained by aberrant kinase activity where the disorder includes condition characterised by a deregulation, e.g. an upregulation or a condition characterised by a deregulation, e.g. an upregulation or a condition characterised by a deregulation, e.g. an upregulation or a condition characterised by a deregulation, e.g. an upregulation or a condition characterised by a deregulation, e.g. an upregulation or a condition of cellular growth, Cellular growth deregulation of cellular growth, cellular growth deregulation of cellular continues and context of differentiation and/or cellular hypertrophy, cardiovascular disorders such as heart failure, hypertension, atrial fibrillation, dilated coardiomyopathy, diapathic cardiomyopathy, or anginal, proliferative context such as cancer (including melanoma, prostate cancer, cervical, breast, colon sarcoma). The kinases and antibodies raised against them care useful in one or more method such as screening assays, predictive medicine and methods of treatment. The nucleic acid molecules are useful corrections, to detect kinase and phosphatase mRNA or a genetic conservation, can be conserved and conservation in a kinase and phosphatase gene and to modulate kinase and conservations and conservations. The present sequence is a cDNA for a human protein conservation in a kinase and phosphatase gene and to modulate kinase and conservations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Identifying compound which binds to a Kinase, useful for treating diseases e.g. cancer, by contacting kinase with test compound and detecting its binding to the kinase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 1; Fig 5; 45pp; English

The kinases and phosphatases and their encoding nucleic acids are potentially useful drug targets. The present invention may also be useful in diagnosing

Novel human kinase and phosphatase nucleic acid molecules useful treating cellular proliferative disorders such as cancer, cardiov diseases, hypertension, heart failure and angina. cardiovascular

Claim 7; Fig 5; 47pp; English.

The invention relates to an isolated human kinase and phosphatase nucleic CC acid molecule appearing as ABX14972, ABX14973, ABX14976, ABX14976, and CC ABX14978-ABX14981, or their complement. Also included are: (1) an CC isolated nucleic acid molecule which is at least 90 % identical to the CC nucleotide sequence ABX14973 or ABX14975, or 95 % identical to the CC nucleotide sequence ABX14973 or ABX14975, or 95 % identical to the CC complement, where the nucleic acid molecule encodes a polypeptide having CC a kinase activity; (2) An isolated nucleic acid molecule which hybridises CC to ABX14973, ABX14976, and ABX14978 in 6X saline sodium citrate (SSC) at 45 plusoC, followed by one or more washes in 0.2X SSC, 0.1% CC sodium dodecyl sulphate (SDS) at 65 plusoC, where the molecule encodes a CC polypeptide with kinase activity; (3) a vector comprising the CC polynucleotides, operatively linked to a recombinant regulatory sequence; and (4) expressing a polypeptide by culturing a host cell comprising the CC composition of the nucleic acids are useful as modulating agents in regulating a variety of cellular processes, and fragments are useful as primers or CC hybridisation probes for detecting kinase and phosphatase encoding cardiovascular disorders such as cancer and cellular growth related disorders including cardiovascular disorders such as heart failure, hypertension, atrial CC campina. The present sequence is one of the human kinase or phosphatase cDNAs of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ACFTS140A

Pujinami sarcoma virus temperature sensitive (ts) p140 transforming protein RNA, 3' end.

NM14930

M14930.1 GI:209688

Stransforming protein.

Pujinami sarcoma virus

Pujinami sarcoma virus

Viruses; Retroid viruses; Retroviridae; Alpharetrovirus.

1 (bases 1 to 2715)

Chen,L.H., Hatada,E., Wheatley,W. and Lee,W.H.

Single amino acid substitution, from Glu1025 to Asp, of the fps oncogenic protein causes temperature sensitivity in transformation and kinase activity

ACFTS140A

The sequence of 1182 amino acids was deduced from the Fujinami sarcoma virus (FSV) transforming protein p130, the product of gag-fps fused gene. p130 is highly homologous to the gag-fes sequence of feline sarcoma virus (see separate entries), and is homologous in the 280 residue carboxyl end (including the

Hampe, A., Laprevotte, I., Galibert, F., Fedele, L.A. and Sherr, C.J.
Nucleotide sequences of feline retroviral oncogenes (v-fes) provide
evidence for a family of tyrosine-specific protein kinase genes
Cell 30 (3), 775-785 (1982)
                                                                                                                                                                                                                                    the transforming polyprotein of the gardner-arnstein strain of feline sarcoma virus (fesv) include the transforming gene (fes) product with tyrosine specific protein kinase activity. The encody protein sequence was compared with the gene products of snyder-theilen strain (see fesvetonc), fps gene of avian fujinami sarcoma virus (see fsv), and src gene of avian sarcoma virus. the last 24 bases represent the sequence of feline leukemia virus.
